Bilingual Collaboration

Flexible Workspaces with Automatic Simultaneous Translation

dmx The Context Machine

Breaking Language Barriers in Collaboration

No translation bottlenecks. No one left out. Just real-time, inclusive teamwork.

What is Linqa?

Linqa is a multilingual collaboration platform designed to facilitate communication and teamwork inside diverse organizations. The Linqa UI supports 2 languages at the same time.

Per Linqa installation the 2 languages can be chosen out of 9. The 9 supported languages are English, Spanish, German, French, Portuguese, Swedish, Finnish, Polish and Ukrainian. This tool was developed with public funding and has been used as a vital tool for the Franco-German Forum for the Future. It has clearly enhanced cooperation among stakeholders across various languages.

Choose Linqa

Make the right choice for your organization.

Have you ever run a bilingual workshop and struggled with translations, side conversations, or mismatched documents?

What We Offer

- Automatic Simultaneous Translation: Engage in real-time discussions while viewing original and translated messages side by side, facilitating understanding like never before.
- Bilingual Collaboration: Whether you're working on documents, notes, or multimedia content, Linqa ensures everything is accessible in both languages.
- Flexible Workspaces: Utilize our digital whiteboard to arrange your content, enhancing teamwork and clarity.
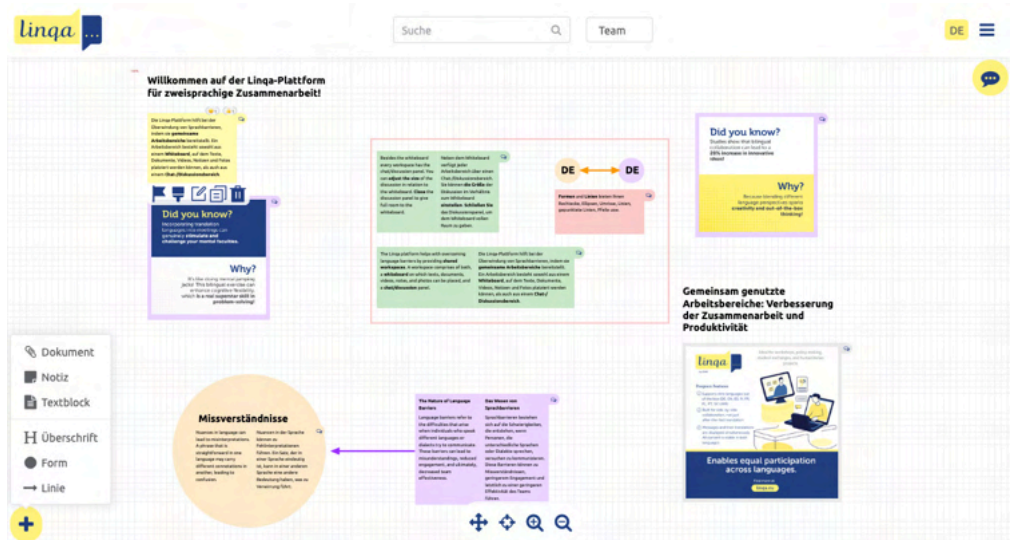

Linqa is open source software.

All users benefit from the further development of the software. More collaborations mean more features, which means more application possibilities for everyone. The costs for customization and further development of the software are based on your individual needs: price by agreement.

![linqa by DMX logo]

The Linqa platform helps overcoming language barriers by offering collaborative workspaces with automatically translated content.
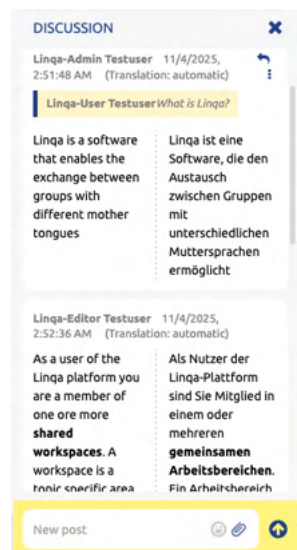

A workspace comprises of both, a whiteboard on which texts, documents, videos, notes, and photos can be placed, and a chat/discussion panel. The contents of both, the whiteboard, and all chat/discussion messages are translated automatically. So everything happening on the platform is available instantly in two languages.

Chat/Discussion Panel

Besides the whiteboard every workspace has the chat/discussion panel. You can adjust the size of the discussion in relation to the whiteboard. Close the discussion panel to give full room to the whiteboard.

Messages and their translations are displayed at the same time. The user's original message is displayed in the left column, the translation in the right column. It is indicated whether the translation was created automatically or edited manually.

by DMX

We hold a strong interest in advancing the development of Linqa in alignment with the General Data Protection Regulations (GDPR). Our aim is to concentrate on the specific requirements of organizations that operate in multiple languages. In collaboration with you, we are committed to creating innovative solutions and identifying potential connections for the web applications currently in use.

Our focus is currently on:
- Expand the bilingual chat or develop it as a standalone chat app.
- Make the UI more flexible to allow more than two languages be used at the same time.
- Simplify the storage and retrieval of important information from the chat.
- Integrate additional languages

How did the project come about?

We at DMX, a Berlin-based IT company, have been working on bilingual software since 2021. It originated from the development of an online platform in collaboration with the Franco-German Forum for the Future. Based on our positive experiences, we are convinced that even more European organizations can benefit from multilingual and in coompliance with GDPR.

Testimonials

"Linqa is a gamechanger for a bilingual project like ours. Linqa enables our partners to chat and exchange among themselves. That way multi-lingual communities of practice can develop organically."
Adam Naber

"The main benefit of developing Linqa as Free Software lies in its potential for widespread adoption and adaptation. We get exactly what we need with Linqa but still its potential goes beyond our specific use case."
Robin Denz
